

Ams optical modules

Overview

Our high performance LEDs and Photodiodes are integrated into ams OSRAM Optical Front end modules. These are appropriately situated for signal strength with sufficient optical isolation, and are ready to be inserted in products that come into touch with the surface. What solution are you looking for today?

We will gladly guide you through! Make a Difference! At AMS Technologies, you can grow, innovate, and make an impact –. We are your European one-stop shop for optical technologies, thermal management, and power electronics. Embedded fault detection: open/short on daisy-chain, over-voltage / -temp. With the TMF8829 from ams OSRAM, Rutronik expands its portfolio with a powerful dToF sensor that sets new standards with a measurement range of up to 11 meters and a wide 80° diagonal field of view (4:3).
