

Andorra Cable Tray Type

AI Overview

Andorra cable trays are modular, rigid support systems designed for efficient cable management in complex building environments, offering flexibility, corrosion resistance, and compliance with standard cable support practices.

Structural Design Andorra cable trays are composed of straight sections, bends, tees, and four-way components of the trough type, forming a rigid structure that closely supports cables. They are suitable for installation independently or attached to building structures and pipe gallery supports, making them ideal for large office buildings, financial centers, hotels, and other venues with dense cable networks. The modular design allows for vertical and horizontal routing, accommodating multiple pipelines while minimizing planar intersections.

Material and Corrosion Resistance The trays are typically manufactured from steel or stainless steel, with options for pre-galvanized, hot-dip galvanized, or stainless steel finishes to enhance corrosion protection. Stainless steel variants often use AISI 316L grade, providing high resistance to corrosion, including stress corrosion and pitting, which is particularly important in environments with exposure to moisture or chemicals. Aluminum versions are also available, offering lightweight construction with excellent atmospheric corrosion resistance.

Installation Guidelines

- Cable separation:** Passive and active cables should be separated, using metal partitions if necessary, to prevent interference.
- Routing considerations:** Trays should avoid planar intersections and be carefully routed through floors, walls, or expansion joints, with positions marked on building drawings to prevent structural damage.
- Support spacing:** Proper support spacing is required to maintain tray integrity and prevent cable sagging, typically following industry standards such as DIN EN 61537.
- Bend radius:** Minimum bend radius must be observed to avoid cable damage when exiting the tray.

Applications Andorra cable trays are widely used in vertical shafts, ceiling spaces, and areas with dense inform...
