

# Anti-tracking solution for power storage cabinets in Cambodia

## AI Overview

Combining secure cabinet hardware with RFID/barcode tracking and remote monitoring provides an effective anti-tracking solution for power storage cabinets in Cambodia.

**Hardware and Cabinet Options** For energy storage, modular outdoor cabinets are recommended. EPC Energy offers scalable solutions in ISO container form factors (10' and 20') with integrated LFP battery racks, HVAC, fire suppression, and energy management systems. These cabinets are designed for both single-site and microgrid applications, providing secure housing for batteries and power electronics while allowing future capacity expansion. Cabinets can be equipped with lockable compartments and tamper-resistant enclosures to prevent unauthorized access.

**Anti-Tracking and Access Control** To prevent unauthorized use or theft, systems like lokkaTRAK integrate RFID or barcode scanning to control access to cabinet contents. Each item or battery module can be tagged, and movements are logged against user credentials and job numbers. Features include:

- Real-time inventory tracking and remote monitoring via dashboards
- Access restriction for expired or unserviceable items
- Audit trails for accountability and traceability
- Alerts for maintenance or replacement needs

**Integration and Local Support** In Cambodia, companies like ATS provide energy and electrical distribution solutions, including design, supply, and manufacturing of customized cabinets. Frontech Engineering offers turnkey ELV and ICT solutions, including access control, surveillance, and monitoring systems, which can be integrated with energy storage cabinets for enhanced security. These local providers can handle installation, system integration, and ongoing maintenance.

**Implementation Considerations** Scalability: Choose cabinets and tracking systems that can expand with additional battery modules or storage si...
