

Botswana distribution box CQC certification

1075KWHH ESS

AI Overview

In Botswana, distribution boxes must comply with BOBS standards, and certification is provided by the Botswana Bureau of Standards (BOBS), which ensures safety, quality, and regulatory compliance.

Certification Overview In Botswana, certification is a formal written assurance by a third party, such as BOBS, that a product meets specified requirements. For electrical distribution boxes, this involves demonstrating compliance with safety, quality, and performance standards relevant to the local market. BOBS operates a Standards Mark Certification Scheme for products and also provides management system certification, including ISO 9001 for quality management.

Applicable Standards Distribution boxes in Botswana are subject to compulsory standards for electrical safety, health, and environmental protection. Botswana adopts both local standards and international standards from organizations such as the International Electrotechnical Commission (IEC), ISO, ASTM, and BSI. This ensures that products like distribution boxes meet recognized safety and performance criteria.

Certification Process

Testing and Inspection: Products must be tested in accredited laboratories. Botswana does not have a national accreditation body, so testing is often conducted in South Africa, Mauritius, or the UK, or through SADCAS-accredited labs.

Documentation Submission: Importers or manufacturers submit test reports and technical documentation to BOBS.

Compliance Certificate: BOBS issues a Certificate of Conformity (CoC) confirming that the distribution box meets the required standards. This certificate is necessary for customs clearance and market entry.

Ongoing Compliance: Certified products may be subject to periodic inspections or audits to ensure continued compliance.
