

Burkinnafaso Galvanized Cable Tray Specifications and Models

AI Overview

Galvanized cable trays in Burkina Faso are primarily made from hot-dip galvanized steel, offering corrosion resistance, durability, and efficient cable management for industrial and commercial applications. Material and Construction Galvanized cable trays are manufactured from high-grade steel sheets coated with zinc through a hot-dip galvanization process, which provides exceptional protection against rust and corrosion, making them suitable for harsh environments such as power plants, industrial facilities, and commercial buildings. The trays are designed to support, organize, and protect electrical cables, while their perforated design ensures proper ventilation to prevent overheating. Common Models and Types In Burkina Faso, manufacturers like Brilltech Engineers and Jeetmull Jaichandlall (P) Ltd. offer a variety of galvanized cable tray models: Perforated Cable Trays: Feature holes along the tray for ventilation and heat dissipation, ideal for high-density cable installations. Solid Bottom Trays: Provide maximum protection against dust and debris, suitable for sensitive environments. Ladder-Type Trays: Consist of side rails with rungs, supporting heavy cables and allowing easy cable access and maintenance. Custom Sizes and Shapes: Many suppliers offer tailored solutions to meet specific project requirements, including different widths, depths, and lengths. Key Specifications Material: Hot-dip galvanized steel (zinc-coated) Corrosion Resistance: High, suitable for outdoor and industrial use Load Capacity: Varies by tray type and size; ladder-type trays support heavier cables Ventilation: Perforated designs allow airflow to prevent cable overheating Installation: Designed for quick and easy assembly, reducing labor costs Applications Galvanized cable trays are widely used in: Electrical distribution systems in industrial plants Commercial buildings and office...
