

CIF price 400G SD-WAN device

AI Overview

The CIF price for a 400G SD-WAN device typically ranges from \$50,000 to \$120,000, depending on vendor, features, and shipping terms. Pricing Overview High-capacity SD-WAN devices, such as Cisco 400G routers, are designed for large branches, data centers, or service provider networks. Pricing varies significantly based on throughput, security features, and licensing options. Cisco's ISR and ASR series with SD-WAN capabilities are commonly used for 400G deployments, and their base hardware can cost tens of thousands of dollars, with additional costs for software licenses, support, and optional SASE security features .Factors Affecting CIF Price

Device Model and Throughput: 400G-capable routers are premium devices. Models like Cisco ASR1002-X or ISR 4400 Series with SD-WAN support are priced higher than lower-throughput devices .Licensing and Features: SD-WAN functionality, advanced security (NGFW, ZTNA, SASE), and centralized management increase the total cost .Shipping and Insurance: CIF pricing includes freight and insurance to the destination port. Costs depend on shipping method, distance, and insurance coverage.Vendor and Region: Prices vary by vendor and local distribution channels. Enterprise discounts or bulk purchases can reduce per-unit cost.Market Estimates

Based on recent SD-WAN pricing data: High-end 400G SD-WAN routers: \$50,000–\$80,000 for hardware alone. With full SD-WAN licenses and security features: \$80,000–\$120,000 per unit. Monthly recurring costs (MRC) for SD-WAN services are additional if cloud-managed or SASE features are included .Recommendations

Request a formal quote from Cisco or authorized resellers specifying CIF terms to get an exact landed cost. Include software licenses, support contracts, and optional security features in the quote to avoid underestimating total cost. Consider bulk procurement or multi-year contracts to optimize pricing. In summary, while the exact CIF price depends on shipping, insurance, and vendor agr...
