

Cable tray horizontal left Myanmar section

AI Overview

Horizontal left cable tray sections are fittings used to change the direction of cable runs to the left in a horizontal plane, available from multiple suppliers in Myanmar.

Overview A horizontal left cable tray section is a type of fitting that allows a cable tray system to turn 90° to the left while remaining in the same horizontal plane. These fittings are essential for routing cables around obstacles or changing the layout of electrical installations without interrupting the cable run. They are compatible with ladder, perforated, and solid-bottom cable trays.

Types and Materials

- Ladder Type:** Provides maximum ventilation for heat-producing cables such as power cables. Constructed with two longitudinal side rails connected by transverse rungs.
- Solid Bottom/Trunking Type:** Offers protection from external damage, suitable for control, communication, and non-heat-producing cables.

Perforated or PVC Options: Available for corrosion resistance and lightweight applications. Materials commonly used include galvanized steel, stainless steel, and mild steel, with options for hot-dip galvanization or powder coating for durability.

Standard Dimensions Horizontal left fittings are available in widths ranging from 50mm to 700mm, with standard heights of 50mm, 70mm, 100mm, 120mm, and thicknesses according to the tray type. Custom sizes can also be manufactured upon request.

Accessories and Installation

- Connectors and Splice Plates:** For joining horizontal left sections to straight trays.
- Brackets and Hangers:** For supporting the tray along walls or ceilings.
- Covers:** Solid or louvered tops for protection against dust, sunlight, and interference.

Suppliers in Myanmar

- Aung Zabu Tun Industrial Ltd.** – Offers cable trays, ladders, trunking, and horizontal fittings with customization options.
- Brilltech Engineers Pvt. Ltd.** – Provides ladder, perforated, PVC, and mild steel cable trays with horizontal fit...
