

Cable tray leading out of the wall

AI Overview

A cable tray leading out of a wall should be supported with wall brackets or fabricated wall sleeves to ensure safety, structural integrity, and proper cable protection.

Wall-Mounted Cable Tray Installation When a cable tray exits a wall, it is essential to provide rigid support and protection at the transition point. This can be achieved using fabricated wall sleeves or end brackets, which secure the tray and prevent stress on the cables as they pass through the wall. Wall sleeves, such as those offered by Legrand, provide a safe, rigid, and aesthetically pleasing support for the cable tray while maintaining proper bending radii for the cables.

Brackets and Supports Cable trays can be mounted to walls using brackets, supports, or hangers. Wall brackets are typically fixed to the wall with screws or anchors, and the tray is attached to the bracket using the included hardware. For vertical or horizontal transitions, ensure that the tray is aligned with the wall opening and that the cables are not subjected to sharp bends or compression.

Material and Finish Considerations The choice of cable tray material depends on the environment. Aluminum trays offer excellent corrosion resistance and are lightweight, while stainless steel trays provide superior durability in harsh or wet environments. Galvanized steel is also commonly used for indoor installations where moderate corrosion resistance is sufficient. Selecting the correct material ensures long-term reliability and safety.

Routing and Cable Protection When routing cables through a wall, maintain proper spacing and bending radius to prevent damage. If the tray has closely spaced rungs, some may need to be removed to allow smooth cable bending. Additionally, ensure that the wall opening is smooth and free of sharp edges, or use protective grommets or liners to prevent cable abrasion.

Best Practices Inspect all materials before installation to ensure they meet approved specifications. Maintain clearance for cable pulling and future maintenance. Use fabricated wall sleeves or e...
