

Case Study of Cable Management System Construction in Denmark

Overview

To enhance reliability, Energinet and AP Sensing implemented a pilot installation of AP Sensing's fiber-based Current Monitoring solution (FbCM) on a new 132 kV HVAC cable connecting two substations in Copenhagen. Energinet recruited suppliers of underground power cables in the form of a framework agreement from 2017 to 2020. As the cables would be installed throughout Denmark, the customer wanted to select a company with proven quality and stable supply capacity. With overall construction costs amounting to about £1.7 billion, it was fitting their latest and most capable voltage source converter (VSC) station technology. dk) is a secure, nationwide digital platform developed by the Agency for Data Supply and Infrastructure (SDFI). It offers a single point of access to detailed data on underground cables and pipes—including water, sewage, gas. Danish Agency for Data Supply and Infrastructure Danish New platform provides underground infrastructure Benefits data in Denmark Benefits • Provides immediate access to data for the requested areas, catering for better planning and execution of works. • Reduces the likelihood of excavation. Installation of 290 km of Nexans' XLPE cables as part of ENERGINET. DK's JFK & Storstrømmen project.
