

Central Asia Five Countries Overseas Warehouse Aggregation Switch 100G

AI Overview

Modern warehouses across Central Asia are increasingly integrating 100G aggregation switches to support high-throughput logistics and e-commerce operations. Warehouse Infrastructure in Central Asia The five Central Asian countries—Kazakhstan, Uzbekistan, Kyrgyzstan, Tajikistan, and Turkmenistan—are experiencing rapid growth in warehouse infrastructure, driven by e-commerce, industrial expansion, and regional trade integration . Key trends include: E-commerce demand: Accounts for roughly 35% of new warehouse space, with third-party logistics and traditional retail contributing additional demand . Modern facilities: Grade-A warehouses with automated order fulfillment, cold chain storage, and flexible multi-tenant layouts are being developed in major cities like Almaty, Tashkent, and Bishkek . Strategic locations: Warehouses are positioned near interstate highways, rail terminals, and multimodal hubs to optimize container freight and reduce empty runs . Investment opportunities: The Eurasian Development Bank (EDB) estimates nearly 2 million square meters of modern warehouse demand, with investment returns of 17–20% per year . Role of 100G Aggregation Switches High-capacity network switches, such as the LANCOM YS-7154CF, are critical for warehouse aggregation and network performance . Key features include: Port density and speed: 48x 25G SFP28 and 6x 100G QSFP28 ports, supporting mixed 1G–100G environments. Switch capacity: Up to 3.6 Tbps, ensuring reliable data throughput for IoT devices, automated picking systems, and cloud-based warehouse management. Deployment flexibility: Can function as an aggregation switch between core and access layers or as a core switch in a collapsed backbone design. High availability: Redundant power supplies, hot-swappable fans, and Virtual Port Channel (VPC) stacking provide fail-safe operation....
