

Cheap and easy-to-use carrier-grade router 1 6T

AI Overview

Carrier-grade routers capable of 1.6 Tbps throughput are typically enterprise-class devices, and while “cheap” is relative, options from vendors like MikroTik, Ubiquiti, and Edgecore offer cost-effective solutions with simplified management. Key Considerations

Throughput and Performance: Carrier-grade routers with 1.6 Tbps throughput are designed for high-density networks, often using modular or fixed high-speed interfaces (10G/25G/100G ports). Consumer-grade routers cannot achieve this level of performance.

Cost-Effective Options:

- MikroTik CCR Series:** The CCR2004-1G-12S+2XS supports up to 1.6 Tbps switching capacity, comes with 12 SFP+ ports and 2 25G ports, and features RouterOS for easy configuration and automation. It is considered one of the most affordable carrier-grade routers for small ISPs or enterprise edge deployments.
- Ubiquiti EdgeRouter Infinity:** Offers up to 80 Gbps per device, scalable with multiple units, and provides a user-friendly web interface for management. While not 1.6T in a single unit, clustering can approach higher throughput.
- Edgecore AS7712-32X:** A more modular option for data centers, supporting high-density 100G ports and simplified management via ONIE and open networking OS.

Ease of Use: Look for routers with web-based GUI, CLI automation, and pre-configured templates. Features like QoS, VLANs, BGP/OSPF support, and SNMP monitoring simplify carrier-grade deployment without deep networking expertise.

Deployment Tips: For smaller budgets, consider MikroTik CCR2004 as it balances high throughput, affordability, and ease of use. Use modular SFP+ or QSFP+ ports to scale bandwidth without replacing the entire router. Ensure redundancy and cooling in rack deployments to maintain reliability.

Summary While consumer-grade routers like the TP-Link Archer AX21 or AX55 are cheap and easy to use, they only s...
