

Dimensions of the power distribution box for surveillance poles

AI Overview

Pole-mounted power distribution boxes for surveillance poles typically range from compact sizes like 9.5" x 8" x 3.25" to larger customizable enclosures designed for multiple cameras and integrated equipment.

Standard Commercial CCTV Power Boxes For smaller installations, such as an 18-channel 12V DC CCTV power supply, the box dimensions are 9.5 inches (width) x 8 inches (length) x 3.25 inches (height). These units are designed to distribute power to multiple cameras, with each channel individually fused for protection, and include a standard AC input cord for easy installation (Amazon product specifications).

Pole-Mounted Enclosures for Outdoor Surveillance For more robust outdoor applications, pole-mounted enclosures are available in various sizes to accommodate power distribution units, UPS modules, and additional electronics. These enclosures are typically made from marine-grade aluminum or powder-coated steel, offering weatherproofing, IP65/IP66 protection, and optional cooling systems. Dimensions are often customizable depending on the number of devices, internal layout, and integration requirements (ArmorLogix, E-abel).

Modular and Customizable Solutions Some surveillance poles use modular junction boxes, such as cube-shaped enclosures for multi-camera setups. For example, the PRO-154 cube junction box sits atop a 1-meter pole and can support up to four cameras, with the option to extend the pole and stack additional modules. These boxes are designed for flexibility in height and internal configuration, allowing integration of power distribution, communication modules, and environmental controls (PRO4 Security).

Key Considerations

- Material and durability:** Aluminum or steel enclosures resist corrosion and withstand outdoor conditions.
- Weatherproofing:** IP65/IP66 ratings ensure protection against dust and rain.
- Internal layout:** Supports P...
