

Distribution box p54

AI Overview

The MiCOM P54 is a high-performance protection relay for overhead lines and underground cables, offering multi-terminal current differential protection, distance backup, and integrated control for distribution and sub-transmission applications.

Overview The MiCOM P54 series is designed for overhead line and cable protection across distribution and sub-transmission networks, supporting any system earthing method and extending to high-voltage applications. It provides multi-terminal current differential protection for up to six terminals, making it suitable for modern networks with multiple connection points, including renewable generation. The series includes models P541 through P546, each offering high-speed protection and optional distance backup.

Protection Features

- Differential Protection:** Phase-segregated elements detect solid and resistive faults with high reliability.
- Distance Protection:** Subcycle distance zones provide backup protection for line faults.
- Directional Earth Fault (DEF) and Transient Earth Fault Detection (TEFD):** DEF is for solidly earthed systems, while TEFD supports isolated or compensated systems.
- Delta Directional Comparison:** Enhances fault detection in complex network topologies.
- Neutral Current Differential:** Complements phase differential for high-resistance earth faults.

Communication and Control The P54 interfaces with longitudinal (end-to-end) communication channels between line terminals, supporting direct fiber optic or multiplexed digital links. It also provides one-box bay control for up to two circuit breakers and eight other switchgear items via a full-color graphical HMI, allowing users to enable or disable functions as needed.

Applications

- Distribution and Sub-Transmission Lines:** Suitable for both overhead and underground lines.
- Multi-Terminal Networks:** Supports up to six terminals, accommodating modern grid configurations.
- Backup Protection:** Integrated distance and overcurrent elements ensure reliability during communication outages.

Configuration and Maintenance The P54 series allow...
