

Fiber optic coupler dismantling and sale price

AI Overview

Fiber optic couplers can be dismantled carefully for parts or resale, with prices varying widely based on type, quality, and condition. Dismantling Considerations Fiber optic couplers are delicate optical components, and dismantling them requires precision tools and safety precautions. Common types include fusion couplers, micro-optic couplers, and planar lightwave circuit (PLC) couplers. Fusion couplers are made by melting twisted fibers, micro-optic couplers use lensed fiber collimators, and PLCs are fabricated via photolithography. Dismantling typically involves: Using fiber strippers and cleavers to separate fibers without breaking the core. Avoiding contamination of the fiber ends; cleaning swabs and alcohol are recommended. Handling PLC couplers carefully, as epoxy-based light paths are fragile and can be damaged easily. Improper dismantling can lead to high insertion loss or unusable components, so only experienced technicians should attempt it. Sale Price The resale value of fiber optic couplers depends on type, condition, and market demand: Fusion couplers: Typically lower cost, around \$50–\$200 per unit for used or refurbished models, depending on insertion loss and brand. Micro-optic couplers: Higher-end, often \$200–\$500 for used units due to ultra-broad bandwidth and thermal stability. PLC couplers: Prices vary widely; standard fixed-ratio PLCs may sell for \$100–\$400, while custom ratios or high fiber-count PLCs can exceed \$500. New couplers from suppliers like EFB-Elektronik or Agiltron can cost significantly more, but refurbished or dismantled units are often sold at 30–70% of new price. Selling Channels Used or dismantled couplers can be sold through: Specialized fiber optic resellers (e.g., FiberOptic Resale, Fibreplus Ltd) who buy refurbished equipment. Online marketplaces like eBay or Amazon for individual components. Direct B2B sales to te...
