

Fiber-to-the-home cable redundancy

Overview

Fiber route redundancy creates a safety net so that if something were to happen to the primary fiber cable the network service is not interrupted. Fiber Path Diversity: Routing fiber optic cables along separate paths. So is there no way to create redundancy in a Fiber network these days except by running 2 cables to a node in star topology?

Sorry if I misused some terms here, but I'm just a computer power user, not a network engineer, or anything of the sort. Any help is appreciated! Archived post. Redundancy involves creating multiple. OLTs typically operate using redundant DC power (-48VDC) and have at least 1 Line card for incoming internet, 1 System Card for on-board configuration, and 1 to many GPON cards. Each GPON card consists of a number of GPON ports. that is each link. Although redundancy is the provider's responsibility, homeowners benefit from understanding its importance and can make a more informed decision when choosing their service provider.
