

Four-Electrical and Four-Optical Industrial-Grade Switches

AI Overview

Industrial-grade switches with four electrical and four optical ports provide robust, high-speed networking for harsh environments, supporting both Gigabit Ethernet over copper and fiber. Overview Industrial-grade switches combining electrical (RJ45) and optical (SFP/FX) ports are designed for demanding environments such as manufacturing plants, power stations, transportation systems, and oil and gas facilities. These switches typically support Gigabit speeds, wide operating temperature ranges, and rugged enclosures to ensure reliable performance under extreme conditions. Key Features Port Configuration: Common models include 4 electrical 10/100/1000Base-T ports and 4 optical 1000Base-X ports for fiber connectivity, allowing flexible network design and long-distance data transmission. Durability: Industrial-grade switches are built with sturdy housings, often aluminum alloy, providing dust, water, shock, and vibration resistance. They can operate in temperatures ranging from -40°C to 85°C depending on the model. Power Supply: Many switches support wide-range DC input (e.g., 12-52 VDC) and some offer redundant AC/DC power inputs for continuous operation. Mounting Options: DIN rail or panel mounting is standard, enabling installation in compact control cabinets or industrial racks. Network Features: Unmanaged switches provide plug-and-play operation, auto-negotiation, full/half-duplex support, and automatic crossover detection. Some models include broadcast storm protection and store-and-forward mechanisms. Compliance and Reliability: These switches meet FCC, CE, RoHS, IEC 61850, and IEEE 1613 standards, with mean time between failures (MTBF) often exceeding 300,000 hours, ensuring long-term reliability. Applications Industrial Automation: Connecting PLCs, sensors, and control systems in factories. Transportat...
