

How much does a ton of Bahamian wire mesh cable tray cost

AI Overview

A ton of wire mesh cable tray typically costs between \$800 and \$2,500, depending on material, gauge, and finish. The price of wire mesh cable trays varies based on several factors, including the type of steel used, wire gauge, surface coating, and supplier location. In 2025, general wire mesh pricing ranged from \$800 to \$2,500 per ton, excluding shipping and taxes, with raw material costs being the primary driver of price fluctuations. Wire mesh cable trays, also known as basket trays, are generally the most affordable type of cable tray due to their lightweight steel construction and ease of installation. Material and Finish Considerations: Galvanized steel is common and balances durability with cost. Stainless steel offers corrosion resistance but is more expensive. Aluminum is lightweight and rust-proof but pricier than steel. Surface coatings like hot-dip galvanizing (HDG) or powder coating increase durability and cost. Bulk Orders and Project Pricing: Ordering in large quantities can reduce the per-ton cost, as suppliers often provide discounts for bulk purchases. Labor and shipping costs also affect the total project cost, especially for heavy shipments to locations like the Bahamas. Installation Benefits: Wire mesh trays are easier and faster to install than conduit or ladder trays, which can save 40–60% of overall project costs, making them cost-effective beyond just the material price. In summary, for budgeting purposes in the Bahamas, you can expect \$800–\$2,500 per ton for wire mesh cable trays, with the final cost influenced by material type, surface finish, order volume, and shipping logistics.
