

How to clear network cabinet alarms

Overview

On the Maintenance Web Interface, under Alarms, click Current Alarms. You can resolve alarms on the active server only. Using SAT commands or other standard troubleshooting procedures, to resolve any major alarms. Additional daylight savings rules can be implemented for the specific locations of hardware supported by the Communication Manager software. If you acknowledge an alarm, it will hide it from the OAM report however it will not delete it. Alarms on the cabinet may be triggered for a variety of reasons and are required to be cleared for your cabinet to operate normally. You may see an alarm if: To resolve alarms this, press and hold the " down " arrow on the system controller until you see " ---" flash on the screen (approx 5. When gateways unregister due to various network blips or maintenance, it can cause a PLAT-ALM in your Communication Manager. These will linger forever until you clear them, It's very simple but you don't do it from SAT, you do it right from the shell.
