

How to fill in the electrical distribution box number on the construction site

AI Overview

The construction site electrical distribution box number should be recorded according to the site's electrical panel labeling, ensuring it matches the identification used in your job filing or permit application. Identify the Distribution Box Each construction site electrical distribution box (DB) is typically labeled on-site with a unique number or code. This number is assigned to distinguish it from other panels and to track electrical loads, circuits, and safety compliance. Check the physical panel for a manufacturer label, site-assigned number, or a temporary tag used during construction. Use the Correct Format When filling in forms such as DOB NOW: Build or other regulatory applications, enter the exact number or code as it appears on the panel. Avoid abbreviations or modifications unless specifically instructed by the filing system. The number may be numeric, alphanumeric, or follow a site-specific convention (e.g., DB-01, DB-A, or Panel 1). Cross-Reference with Electrical Plans Verify the distribution box number against the electrical design drawings or site documentation. Construction electrical plans often include a schedule of panels with their corresponding numbers, locations, and connected circuits. This ensures consistency between the physical installation and the official records. Filing in Job Applications For NYC construction projects, when submitting an electrical job filing through DOB NOW: Build, locate the field for the electrical distribution box number in the ED16A or related forms. Enter the number exactly as labeled on the site panel. If multiple boxes exist, list each number separately according to the form's instructions. Ensure that the number matches the panel referenced in your load calculations and safety documentation. Best Practices Label clearly on-site: Use durable tags or stickers to prevent confusion. Document in the electrical log: Maintain a record of all...
