

How to get the right length of fiber optic cable

Overview

Fiber optic cables can be custom cut by Proterial Cable America or distributor to match your required lengths for each cable run. Alternatively, you can order a reel matching the total length needed and cut your own segments as necessary. In this blog, I will discuss the fiber optic cable distance, the effect factors, how to choose the right fiber optic cables, and how to compare the transmission distances of single-mode and multimode fiber optic cables. While some customers know exactly what they need, many don't. If you're unsure about the specifics for your network, our fiber solutions team here at Cables Plus is here to help. We advise you to incorporate a safety buffer when ordering. Whether your project involves short patch links or long-haul backbone routes, the right cable choice ensures your network operates at peak efficiency.
