

Is a 4-core optical fiber cable a fixed asset

AI Overview

A 4-core optical fiber cable can be classified as a fixed asset if it is purchased for long-term use in the company's operations and meets capitalization criteria; otherwise, it may be treated as inventory.

Fixed Asset Criteria

For an item to be recorded as a fixed asset, it generally must:

- Exceed the company's capitalization threshold – small purchases below this limit are expensed immediately.
- Provide future economic benefits over more than one accounting period – meaning it is intended for long-term use rather than immediate resale.

Fiber optic cables installed for internal infrastructure, such as connecting company facilities or supporting a network, typically meet these criteria and are capitalized and depreciated over their useful life.

Depreciation reflects wear, technological obsolescence, and usage intensity.

When Fiber Is Not a Fixed Asset

If the fiber optic cable is purchased for resale or as part of a customer project, it is usually treated as inventory and expensed to cost of goods sold when the project is completed. In this case, the company does not retain long-term control or derive ongoing economic benefits from the cable itself. Capitalizing such inventory as a fixed asset could create accounting inconsistencies and tax implications.

IFRS Considerations

Under IFRS, fiber optic cables used in operations are depreciable tangible assets. Companies can choose depreciation methods such as straight-line or units-of-production, depending on usage patterns. If the cable is part of a leased network or used to provide services to another entity, the accounting treatment may differ, and rights to use specific wavelengths could be considered intangible assets instead of physical fixed assets.

Practical Example

Capitalized as Fixed Asset: A company installs a 4-core fiber cable to connect its data centers. The cable cost exceeds the capitalization limit and will be used for several years. It is re...
