

Kenya Weak Elevator Type Cable Tray Quotation

AI Overview

Weak elevator type cable trays in Kenya are available from multiple suppliers, with prices and specifications varying by material, size, and design. Overview of Cable Trays for Elevator Applications Elevator cable trays are typically light-duty or weak-type trays, designed to support control, signal, and power cables without bearing heavy loads. Common materials include galvanized steel, stainless steel, and aluminum, which provide corrosion resistance and durability for indoor or semi-exposed installations. The main types suitable for elevator use are: Ladder trays: Provide ventilation and easy cable access, ideal for multiple small cables. Perforated trays: Lightweight and allow airflow, reducing heat buildup in elevator shafts. Solid bottom trays: Offer protection for sensitive cables from dust or moisture, though they may require more maintenance. Wire mesh trays: Flexible and easy to install in tight elevator shafts or compact spaces. Standard Dimensions and Specifications Length: Typically 8 feet (2.44 meters) per section. Widths: 25 mm to 100 mm, depending on cable volume. Heights: 50 mm to 600 mm. Thickness: Perforated trays range from 0.6 mm to 3.0 mm. These dimensions are suitable for light-duty elevator cable routing, ensuring safety and ease of maintenance. Supplier Options in Kenya Duff Engineering Ltd – Offers standard and custom cable trays for industrial and commercial applications, including light-duty options suitable for elevators.
