

L3 optical module

Overview

FiberLight ® L 3 is a unique and innovative light source module, which combines the features of LED technology, such as long lifetime and low power consumption with a broadband UV-spectrum for the first time. L3Harris is leveraging more than 40 years' experience in developing acousto-optic (AO) devices and technologies to design illumination modules that control the quantum states of trapped ions with extreme precision. With their low-noise, low-drift and low-cross-talk capabilities, these subsystems are now. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Following the trend to smaller devices, the compact FiberLight ® L 3 requires only a very. 8x10Gbps SFP+ slot, Support Open standard SFP interface optical module, Web/CLI L3/L2 Managed, Support device/port config and query. Power and port led indicator light, Widely Used for various high performance and long-distance fiber transmission environments [Main Features] 10G SFP+: The network. AirLive L3-10XGF12, supporting 12 GE SFP/10GE SFP+ ports, is one of the L3-XGF series switches. This series delivers high-performance, super-reliable 10 GE switches with comprehensive Quality of Service and security capabilities.
