

Length of Swedish steel cable trays

AI Overview

Standard steel cable trays in Sweden are typically available in 3-meter and 6-meter lengths.

Standard Lengths
Ahlsell Cable Ladders: The MP-S type steel cable ladder, made of Sendzimir galvanized sheet, is available in 3 meters as standard, with an option for 6 meters for easier handling in larger installations or longer runs.

Metsec Steel Cable Trays: Straight lengths for light, medium, and heavy duty trays are generally supplied in 3-meter sections, with widths ranging from 50 mm up to 900 mm depending on the duty rating and application.

Additional Considerations
Material and Finish: Trays are available in pre-galvanized, hot-dip galvanized, or stainless steel (grade 1.4404/316L), which can influence the choice of length for handling and installation.

Tray Type: Ladder, perforated, and channel trays may have different standard lengths, but 3 meters is the most common for Swedish steel trays, with some suppliers offering 6 meters for ladders.

Installation Flexibility: Shorter lengths (3 meters) are easier to maneuver in tight spaces, while longer lengths (6 meters) reduce the number of joints and supports required for long cable runs.

In summary, when selecting steel cable trays in Sweden, expect standard lengths of 3 meters, with 6 meters available for certain ladder types, and always verify the specific product dimensions with the supplier to match installation requirements.
