

Madagascar Stainless Steel Cable Tray Specifications

AI Overview

Stainless steel cable trays in Madagascar are typically manufactured in 304 or 316 stainless steel, with ladder, perforated, and solid-bottom designs, meeting international standards for durability and corrosion resistance. Material and Grades Stainless steel cable trays are commonly made from AISI Type 304 or 316 stainless steel. Type 304 offers high resistance to rust and is suitable for most indoor applications, while Type 316 includes 2–3% molybdenum, enhancing corrosion resistance in coastal, high-saline, or chemical processing environments. Hardware such as bolts, nuts, and splice plates are also made from Type 316 stainless steel to ensure uniform durability. Types and Designs Ladder Cable Trays: Consist of two longitudinal side rails with transverse rungs welded at intervals of 6, 9, or 12 inches. Each rung supports a 200 lb concentrated load with a safety factor of 1.5. Perforated Cable Trays: Feature a solid base with perforations for ventilation and drainage, suitable for light to medium cable loads. Solid-Bottom Cable Trays: Provide full support for sensitive cables and are used in environments requiring maximum protection. Dimensions and Load Capacity Widths: Standard widths range from 6 to 36 inches, with custom sizes available. Depths: Typically 3, 4, or 5 inches, depending on cable load requirements. Lengths: Straight sections are supplied in standard lengths of 10, 12, 20, or 24 feet (3–6 meters), with splice plates connecting sections securely. Standards and Compliance Cable trays in Madagascar are manufactured to comply with ASTM, ISO, and NEMA VE 1 standards, ensuring structural integrity, electrical safety, and corrosion resistance. They are suitable for residential, commercial, and industrial installations, and can be customized to meet specific project requirements. Local Manufacturers Leading suppliers in Madagascar include Brilltech Engineers Pv...
