

Malawi Fiber Optic Cable Company

AI Overview

The Electricity Supply Corporation of Malawi (ESCOM) owns and operates Malawi's fiber optic cable network through its business unit, Optic Fiber Communications. Overview ESCOM, the national electricity utility, has developed the largest fiber optic network in Malawi, leveraging its electricity infrastructure to provide nationwide connectivity. The network includes metro rings in 10 districts and access rings in the four major cities, ensuring broad coverage and enhanced reliability. ESCOM's fiber network supports various sectors, including internet service providers (ISPs), mobile network operators (MNOs), government offices, commercial institutions, and educational and health facilities. Optic Fiber Communications is a business unit of ESCOM that manages the fiber optic operations. It has been actively involved in promoting digital connectivity and supporting ICT initiatives, such as funding the ICT Association of Malawi's expos to advance the country's digital economy. ESCOM is also in the process of establishing a subsidiary company specifically to handle the fiber optic business, aiming to improve service delivery and reduce internet costs for Malawians. Strategic Importance By owning the fiber optic infrastructure, ESCOM ensures that Malawi has a resilient and scalable network capable of supporting high-speed internet services across the country. The network's integration with the electricity grid reduces vulnerability to vandalism and enhances redundancy, allowing traffic to be rerouted in case of disruptions. This infrastructure is a key component of Malawi's National Broadband Strategy and Vision 2063, which focus on expanding digital access and fostering economic development.
