

Price and Specifications of 24-Core Optical Cable

AI Overview

The price of 24-core ADSS optical fiber cable typically ranges from \$0.80 to \$1.50 per meter, depending on specifications, materials, and manufacturer. Price Range and Factors The cost of a 24-core ADSS cable varies based on several key factors: Cable Construction: Loose tube design with water-blocking compounds, aramid fiber reinforcement, and polyethylene or anti-tracking outer jackets affect durability and price. Fiber Type: Single-mode fibers are preferred for long-distance transmission, while multi-mode fibers are suitable for shorter distances, influencing cost. Mechanical Strength: Tensile strength, span length, and environmental resistance (UV, moisture, temperature) impact pricing. Manufacturer and Brand: Reputable brands with high-quality fibers and rigorous quality control may charge higher prices but offer better reliability. Additional Features: Anti-tracking additives, flame-retardant compounds, or armored designs increase cost but enhance safety and longevity. Typical Applications 24-core ADSS cables are widely used for: Telecommunications: Backbone connections for internet and phone services. Utilities: Communication between substations along high-voltage lines. Transportation and Smart Cities: Supporting traffic systems, IoT devices, and urban infrastructure. Installation Considerations ADSS cables are self-supporting and non-metallic, allowing installation on power line towers or roadside poles without additional support structures. This reduces labor and installation costs, but project-specific factors like span length and environmental conditions can influence the total cost. Summary For budgeting purposes, expect \$0.80–\$1.50 per meter for standard 24-core ADSS optical fiber cables, with variations depending on fiber type, jacket material, mechanical design, and supplier.
