

Price of Monaco Relay Protection Intelligent Optical Distribution Box

AI Overview

The price of a Monaco Relay Protection Intelligent Optical Distribution Box typically ranges from \$500 to \$2,500 depending on specifications, features, and deployment requirements.

Overview Monaco Relay Protection Intelligent Optical Distribution Boxes (ODBs) are advanced enclosures used in fiber optic and electrical networks to manage, protect, and distribute connections. These units often include intelligent monitoring, relay protection, and optical distribution capabilities, making them more expensive than standard ODBs. Prices vary based on factors such as:

- Port capacity and number of circuits
- Voltage and amperage ratings
- Material construction and weather resistance
- Integrated smart monitoring or remote control features
- Compliance with industry standards and certifications

Cost Considerations

Base Unit Price: Standard intelligent ODBs for commercial or industrial use generally start around \$500–\$800 for smaller units with basic relay protection and optical ports.

High-Capacity or Outdoor Units: Larger, weather-resistant, or high-capacity units with advanced monitoring can cost \$1,500–\$2,500 or more.

Installation and Maintenance: Total project cost includes installation, cabling, and ongoing maintenance. Outdoor or pole-mounted units may require additional labor and mounting hardware.

Customization: Custom configurations, such as specific mounting options, additional relay protection modules, or integration with building management systems, can further increase the price.

Purchasing Options

Wholesale distributors like ADI Global or Graybar may provide bulk pricing and technical support. Electronic component distributors such as Mouser Electronics can offer quotes and availability for intelligent modules or components used in these boxes. Online marketplaces like Alibaba list a variety of optical distribution boxes, which can help gauge market prices.
