

Price of Simple T-Connector for Cable Trays

AI Overview

Simple T-connectors for cable trays typically range from \$10 to \$50 per piece, depending on material, size, and supplier. Overview T-connectors, also known as T-pieces, are used to create horizontal branches in cable tray systems, allowing secure and organized routing of electrical and communication cables. They are commonly made from galvanized steel, stainless steel, aluminum, or fiberglass-reinforced plastic (FRP), with galvanized steel being the most widely used for durability and corrosion resistance. Installation is straightforward, often requiring only a few screws to secure the trays together. Pricing Factors Material: Galvanized steel T-connectors are generally more affordable, while stainless steel or FRP versions cost more due to higher corrosion resistance and mechanical strength. Size and Dimensions: Larger connectors for wider cable trays or heavy-duty industrial applications are priced higher. For example, a 600x60 mm ladder-type T-connector may cost more than a smaller standard size. Supplier and Quantity: Bulk purchases from manufacturers or distributors like JLH Electric or online marketplaces such as Amazon can reduce per-unit cost. Typical Price Range Small to medium galvanized steel T-connectors: \$10-\$25 per piece Heavy-duty or larger connectors: \$30-\$50 per piece Bulk packs (e.g., 50 units): Often available at discounted rates, sometimes under \$20 per unit depending on supplier Where to Buy Online distributors: Ekabel24, JLH Electric, Elsprendimai, and Amazon offer a variety of T-connectors with specifications and shipping options. Local electrical supply stores: Many industrial suppliers stock standard T-connectors for immediate purchase. Custom orders: Some manufacturers provide OEM/ODM services for connectors tailored to specific project requirements. In summary, the price of a simple T-connector for cable trays depends on material,...
