

Price of Small Busbar Electrical Graphics

AI Overview

Small busbars typically range from £5 to £50 per unit depending on material, size, and insulation. Pricing Overview The cost of small busbars varies significantly based on material, size, and type. Copper busbars are generally more expensive than aluminum due to higher conductivity and durability, while aluminum offers a lighter and lower-cost alternative. Insulated busbars, which include PVC or epoxy coatings, also carry higher prices due to additional manufacturing complexity. For small distribution boards or switchgear panels, comb busbars or pin-type busbars are commonly used. Typical prices for these small busbars are: Single-pole 63A busbar (1 meter): approximately £10–£15 per unit Two-pole 63A busbar (1 meter): approximately £15–£20 per unit Three-pole 63A busbar (1 meter): approximately £20–£30 per unit Insulated or custom busbars: £25–£50 depending on complexity and insulation Factors Affecting Price Material: Copper is more expensive than aluminum, but requires less cross-section for the same current rating. Size and cross-section: Larger cross-sections increase raw material costs. Insulation: Coated or insulated busbars cost more due to additional manufacturing steps. Fabrication: Bends, tap-off points, and custom shapes increase labor and tooling costs. Bulk purchasing: Buying in larger quantities can reduce per-unit cost. Shipping and import duties: Freight can add to the final price, especially for international orders. Where to Buy Small busbars can be purchased from online suppliers such as RS Components, EC Products UK, and Amazon UK, which offer a range of copper, aluminum, and insulated busbars suitable for small electrical panels. By considering these factors, you can select a busbar that balances cost, durability, and electrical performance for your specific application.
