

Price of a 32-port KVM switch

AI Overview

A 32-port KVM switch typically ranges from \$500 to over \$3,000 depending on features, brand, and remote management capabilities.

Typical Price Ranges

ATEN KH1532A 32-Port KVM Switch: This Cat 5 KVM switch supports PS/2 and USB consoles, multiple video interfaces (VGA, DVI, HDMI, DisplayPort), and daisy-chaining up to 1024 computers. It is designed for SMBs and data centers, offering Full HD video and flexible connectivity. The price for this type of switch generally falls between \$500 and \$1,200 depending on the retailer and included accessories.

Raritan Dominion KX III DKX3-832: This is an enterprise-class KVM-over-IP switch with BIOS-level remote management for 32 servers, supporting multiple video formats, audio, virtual media, smart card access, and mobile management. It is suitable for large data centers and high-security environments. Enterprise KVM-over-IP switches like this typically cost \$2,500 to \$3,500 or more, reflecting advanced features and remote access capabilities.

Factors Affecting Price

Remote Management: KVM-over-IP switches that allow remote BIOS-level control and virtual media access are significantly more expensive than standard KVM switches.

Video Interfaces: Support for multiple video standards (HDMI, DVI, DisplayPort, VGA) increases cost. Full HD or 4K support adds to the price.

Scalability: The ability to daisy-chain multiple switches to control hundreds of computers can influence pricing.

Security Features: Military-grade network security, smart card/CAC support, and centralized management software increase the cost.

Brand and Warranty: Established brands like ATEN and Raritan often command higher prices due to reliability, support, and warranty coverage.

Summary

For a basic 32-port KVM switch suitable for SMBs, expect \$500–\$1,200. For enterprise-grade KVM-over-IP switches with advanced remote management and security, prices typically range from \$2,500 to \$3,500+. Choosing the right model depends on your network size, remote access needs, video requirements, and security considerations.
