

Price of a standard level 3 distribution box

AI Overview

The typical price of a Level 3 distribution box ranges from approximately \$40 to \$150, depending on material, protection grade, and features.

Price Overview Level 3 distribution boxes, often used in industrial or commercial applications, are generally more robust than residential units. Pricing depends on several factors:

- Material:** Aluminum alloy and steel boxes are more expensive than plastic enclosures, with aluminum alloy commanding the highest price due to durability and corrosion resistance, while plastic units are the most affordable (\$10–\$25 for basic residential types) and steel units around \$40 for industrial use.
- Protection Grade:** Higher IP ratings (e.g., IP65 for waterproof and dustproof) increase cost, as these boxes are suitable for outdoor or harsh environments.
- Capacity and Features:** The number of circuits, amperage rating, and inclusion of smart monitoring, surge protection, or remote control features can significantly affect pricing. Commercial and industrial boxes with advanced load management or energy monitoring may cost \$100–\$150 or more per unit.
- Customization:** OEM branding, modular designs, and integration with building management systems can further increase the price.

Market Considerations

- Residential vs Industrial:** Residential boxes are simpler and cheaper, while Level 3 boxes for industrial use are designed for heavy-duty applications, including factories, data centers, and large commercial buildings.
- Long-Term Value:** Investing in higher-quality Level 3 boxes reduces maintenance costs and prevents equipment damage, making them cost-effective over time.
- Wholesale Orders:** Bulk purchases can lower per-unit costs, especially for distributors or large projects.

Summary For a Level 3 distribution box, expect a standardized price range of \$40–\$150, with the final cost influenced by material, protection rating, capacity, sm...
