

Price of cable tray flipping

AI Overview

Cable tray flipping is a software feature in AutoCAD Plant 3D that allows quick rotation of elbows, tees, and other fittings, but its cost is typically included in the software or app subscription rather than sold separately. Understanding Cable Tray Flipping Cable tray flipping is a design tool feature used in applications like AutoCAD Plant 3D. It allows engineers to flip elbows, tees, and other cable tray components without manually disconnecting and rotating them, saving significant time during routing and layout design. This feature is often part of auto-routing or cable tray management apps, which may include additional functions like automatic cut length calculation, isometric compatibility, and integration with specific cable tray catalogs. Software and App Costs The cost of cable tray flipping is generally bundled with AutoCAD Plant 3D add-ons or routing apps. Pricing varies depending on the vendor, subscription model, and whether the app is part of a larger suite. For example, apps compatible with Python-based cable tray catalogs or specific manufacturers like Khai Long Technology may require a custom license or subscription, which can range from a few hundred to several thousand dollars depending on project scale and features. Physical Cable Tray Costs If you are also considering the physical cable trays that will be flipped in the design, prices vary by type and size. For example, hot-dip galvanized ladder-type cable trays of standard 2.4-meter length are priced per unit, and fittings like elbows, tees, and reducers are priced per piece. Prices can also vary by region and supplier, with minimum order quantities and delivery charges affecting the total cost. Practical Advice For software pricing, contact the vendor or check the app marketplace for AutoCAD Plant 3D add-ons. For physical cable trays, refer to supplier price lists for ladder, trunking, or under-desk trays, and include fittings if your design requires flipping or rotation in the layout. Consider that flipping in software reduces labor and design time, which can offset the cost of purchasing the...
