

Price of electrical distribution box for a single room

AI Overview

A standard single-room electrical distribution box typically costs between \$400 and \$700 for the unit alone, with total installed costs ranging from \$600 to \$1,100 depending on amperage and installation requirements.

Cost Breakdown

Unit Price: For a basic 100-amp residential panel with a standard metal enclosure, the cost usually falls between \$400 and \$700. Higher-capacity panels (e.g., 200 amps) or units with advanced safety features can exceed \$1,000 for the panel itself.

Installation Costs: Labor and basic wiring typically add \$200 to \$400, bringing the total installed price for a single-room setup to \$600–\$1,100. Costs may increase if the installation requires upgrading the service disconnect, meter socket, or running long wiring distances.

Material and Feature Considerations:

Enclosure Type: Indoor metal enclosures are standard; weatherproof or outdoor-rated boxes cost more.

Amperage Capacity: 100-amp panels are sufficient for most single-room setups; higher amperage increases cost.

Safety Features: Ground-fault protection, surge protection, and smart monitoring can raise the price.

Customization: Modular systems or integration with smart home systems may add to the cost.

Additional Factors: Regional labor rates, accessibility, and compliance with local electrical codes can influence the final price. Urban areas often incur higher labor costs, while simpler installations in accessible locations may reduce expenses.

Summary

For a typical single-room electrical distribution box:

- Unit cost: \$400–\$700
- Total installed cost: \$600–\$1,100
- Higher-end or specialized units: \$1,000+ for the panel, with total costs exceeding \$1,500 depending on features and installation complexity.

Choosing the right box involves balancing capacity, safety, and future expansion needs while considering installation and labor costs.
