

Price of high-quality hot-dip galvanized cable trays in Afghanistan

AI Overview

High-quality hot-dip galvanized cable trays typically range from \$15 to \$50 per meter, depending on thickness, type, and supplier, with additional costs for shipping to Afghanistan.

Overview of Hot-Dip Galvanized Cable Trays

Hot-dip galvanized cable trays are made from mild steel coated with zinc, providing excellent corrosion resistance and durability in harsh environments. They are widely used in industrial, commercial, and infrastructure projects to support and organize electrical cables. These trays are available in perforated and ladder types, with perforated trays offering better ventilation and lighter load support, while ladder trays are suitable for heavier cables.

Price Factors

- Material Thickness:** Standard thickness ranges from 0.5 mm to 3 mm, with thicker trays offering higher load capacity and durability.
- Tray Type:** Perforated trays are generally slightly cheaper than ladder trays due to lower material usage.
- Dimensions:** Widths from 50 mm to 1000 mm and lengths of 2–3 meters affect pricing.
- Coating Quality:** Hot-dip galvanization with 80–100 microns coating ensures long-term corrosion protection, which can increase cost.
- Accessories:** Couplers, bends, tees, and covers are additional costs but necessary for complete installation.
- Shipping and Import:** Since Afghanistan imports most industrial materials, shipping, customs duties, and local handling can add 20–40% to the base price.

Estimated Price Range

- Perforated trays (1–2 mm thickness): \$15–\$25 per meter
- Ladder trays (2–3 mm thickness): \$30–\$50 per meter
- Complete system with accessories: \$40–\$70 per meter, depending on complexity and shipping

Recommendations

Source from reputable suppliers in India, China, or Vietnam, which are major producers of hot-dip galvanized trays. Verify coating thickness and compliance with IEC 61537 for fire and mechanical safety. Consider bulk orders to r...
