

Remote restart of core switch

Overview

You can reboot or reload the switch by using the reload command without any options. Use the configure terminal command to enter the global. For anyone who prefers a visual approach, the Remote Desktop Protocol (RDP) is your most direct route. From there, it's as simple as clicking the Start Menu and hitting "Restart"—just like you were sitting in. Reboots can be initiated remotely using Live Tools, located on the device details page. More information about Live Tools can be found [here](#). If devices are experiencing connectivity trouble, please contact Cisco Meraki technical support for assistance. There are no recommended articles. Ensure that an FTP or TFTP server is available to download the software image. Copy the new image onto your supervisor modules in bootflash: or slot0:. Before you begin to use remote control, ensure that you review the information in the following articles: [Here are three ways to start the remote control viewer](#): In the Configuration Manager. The Restart-Computer cmdlet restarts the operating system on the local and remote computers.
