

Ribbon Four-Core Optical Cable

Overview

OM4 multi-core ribbon fiber optic cable is a high-bandwidth, laser-optimized multimode fiber solution designed for ultra-high-speed data transmission in data centers, enterprise networks, and high-performance computing environments. The ribbonized structure combines multiple fibers (e.g. A common ribbon contains 12 fibers, although other fiber counts may be used depending on the cable design, splicing method and application. Several ribbon units can. Flexible, finger-peelable subunits provide protection of each 144-fiber ribbon stack, eliminating the need for furcation when routing directly into hardware and enabling individual access to each ribbon for efficient management in splice trays. At the same time, these cables allow installers to double the density of vital pathways versus.
