

Routers that support direct fiber optic connection

AI Overview

Routers with SFP/SFP+ ports or multi-gig WAN ports are required for direct fiber optic connections. Key Features for Fiber-Ready Routers To connect directly to fiber optic internet, a router should have:

- SFP/SFP+ ports:** These allow direct fiber modules to plug in without needing an external media converter, supporting speeds from 1 Gbps up to 10 Gbps or more.
- Multi-gig WAN ports:** Routers with 2.5 Gbps, 5 Gbps, or 10 Gbps WAN ports can fully utilize high-speed fiber plans.
- High-performance CPU and RAM:** Ensures the router can handle gigabit or multi-gigabit throughput without packet loss.
- Wi-Fi 6 or Wi-Fi 7 support:** Provides maximum wireless speeds to match fiber broadband, with features like MU-MIMO, OFDMA, and tri-band configurations.
- LAN aggregation:** Combines multiple LAN ports for faster wired connections, useful for high-bandwidth devices.
