

Status of Optical Cable Construction in the Netherlands

AI Overview

The Netherlands has made significant progress in fiber-optic deployment, with over 8.26 million connections installed, though some rural and select urban areas still lag behind. Current Coverage and Growth As of the latest reports, 8.26 million fiber-optic connections have been installed across the Netherlands, up from 7.94 million in the previous quarter, reflecting a 5.28% increase in subscribers using fiber-optic internet. The number of households with fiber subscriptions has now surpassed those using traditional cable for fixed internet, with 3.3 million households on fiber compared to 3.2 million on cable. Overall, 87% of Dutch households enjoy internet speeds of at least 100 Mbps, highlighting the rapid transition from copper to fiber networks.

Regional Disparities Despite the nationwide growth, the roll-out is not uniform. Rural areas and some parts of the densely populated Randstad region, including streets in Amsterdam, still lack fiber coverage. Provinces such as Groningen, Friesland, and Zeeland are slightly behind, and five municipalities—Gulpen-Wittem, Voerendaal, Oostzaan, Enkhuizen, and Noord-Beveland—have coverage below 10%. These gaps are often due to commercial viability challenges in less densely populated areas.

Ongoing Projects and Providers Several providers are actively expanding fiber networks. Open Dutch Fiber (ODF) has accelerated its roll-out, connecting over 600,000 homes and aiming to reach more than 2 million homes by 2025, including urban and semi-urban areas. ODF operates an open-access network, allowing multiple providers to offer services, which promotes competition and lower prices for consumers. Other initiatives, such as interactive maps from providers, allow residents to check construction status and plan installations at their addresses.
