

Tonga Mesh Cable Tray Specifications

AI Overview

Tonga high-quality mesh cable trays are durable, customizable wire mesh systems designed for industrial and commercial cable management, offering robust support, corrosion resistance, and flexible installation options. Material and Construction Tonga mesh cable trays are typically constructed from high-quality welded steel or aluminum wire, providing strength and stability for heavy-duty cable pathways. The wire mesh is spot-welded to ensure structural integrity, and trays are often treated with galvanization, powder coating, or stainless steel finishes to resist corrosion and extend service life. Aluminum variants are also available for lightweight applications and environments requiring non-magnetic or corrosion-resistant properties.

Dimensions and Load Capacity These trays are available in a variety of widths, heights, and lengths to accommodate different cable volumes and installation requirements. Standard widths range from 100 mm to 600 mm, with heights typically between 50 mm and 150 mm, and lengths commonly around 2 to 3 meters, though custom sizes can be manufactured. The load capacity depends on material, mesh thickness, and span, with high-quality trays engineered to support both low-voltage and heavy power cables safely.

Installation and Customization Tonga mesh cable trays are designed for easy installation, allowing for quick assembly and modification of cable routes. They can be mounted indoors or outdoors, and are compatible with standard fittings, brackets, and accessories for bends, tees, and junctions. Manufacturers offer custom adaptations for unusual layouts, high-volume cable runs, or compliance with specific standards such as fire-rated or industrial-grade installations.

Applications These cable trays are widely used in industrial plants, data centers, commercial buildings, power plants, and high-rise construction projects. Their open mesh design allows for ventilation, heat dissipation, and easy cable inspection, making them suitable for both power and data cabling.
