

# UAE Trough-type Cable Tray Models

## AI Overview

Trough-type cable trays in the UAE are widely available in hot-dip galvanized, stainless steel, and powder-coated finishes, designed for industrial, commercial, and outdoor applications requiring robust cable support and protection.

**Overview of Trough-Type Cable Trays**

Trough-type cable trays are solid-bottom or partially perforated trays that provide a continuous support surface for cables, offering protection from dust, debris, and electromagnetic interference (EMI). They are ideal for sensitive instrumentation, data cables, and power cabling where maximum protection and organized routing are required. Unlike ladder trays, trough trays have a continuous base, which prevents sagging and ensures even load distribution.

**Material and Finish Options**

In the UAE, trough-type trays are commonly manufactured in:

- Hot-Dip Galvanized (HDG) Steel:** Provides excellent corrosion resistance for outdoor and industrial environments, protecting against coastal salt spray, UV exposure, and high temperatures.
- Stainless Steel (Grades 304 or 316L):** Suitable for highly corrosive environments or chemical plants, offering long-term durability.
- Powder-Coated or Epoxy-Coated Steel:** Adds additional protection and allows color coding for different circuits, improving safety and maintenance efficiency.

**Load and Duty Ratings**

Trough trays are available in light, medium, heavy, and extra-heavy duty configurations, depending on the weight and volume of cables. Standard lengths are typically 3 meters, with custom lengths available to suit project requirements. They are engineered to comply with IEC 61537, BS EN 61537, and NEMA VE standards, ensuring safe installation and reliable performance.

**Applications in the UAE**

Trough-type trays are widely used in:

- Industrial facilities and power plants for heavy-duty cable support.
- Commercial buildings for structured cabling and data networks.
- Outdoor installations where environmental protection is critical.
- Oil & gas projects requiring robust, corrosion-resistant cable management systems.
