

What configurations to check when monitoring the core switch

Overview

We recommend that you monitor the switch CPU, memory, file systems, and environmental resources on a regular basis. Obtain information about your switch such as the running software release. These commands give you general details about your switch, like the software it is running, how long it has been powered on, and what hardware is installed. `show version` Shows the current active configuration that is. Network switch monitoring means keeping a close eye on how your switches are performing in real time, from their availability to traffic flow and overall health. The goal?

Catch issues before they snowball into outages or degraded network performance. With the help of our Core Switches device template, you can easily discover and monitor critical performance metrics without any hassle. More expensive switches and routers have addresses.
