

What is an 18u network cabinet

Overview

A 18U standing network cabinet is a freestanding enclosure designed to house rack-mountable IT and networking equipment (servers, switches, patch panels, etc). The “U” (unit) is a standardized measurement: 1U = 1.75 inches, so an 18U cabinet provides 31.5 inches of vertical mounting space. The “18U” designation refers to the unit height—each “U” equals 1.5 inches) of vertical mounting space. Servers and IT equipment are designed to match this sizing—like a 1U firewall or a 2U server—so you can. The 18U server racks are great for organizing larger IT equipment in applications where space is at a premium, such as data centers, or server rooms. It is strongly recommended using the cabinet as a floor (free) standing unit, although the structure allows mounting the cabinet on vertical. 18U server racks and data cabinets from Server Room Environments including wall mounting data cabinets, floor standing server racks supplied on casters and roadside enclosures.
