

What to do if the pigtail cable is too long to fit

Overview

The pigtail conductor should be cut to a length that allows it to easily reach the device terminal without strain. You'll need to find a location in the panel where the factory pigtail length will work. If the panel is set up as Service Entrance with the neutral bonded to ground, the neutral assembly is used as both neutral. We electricians have many tricks, but there's one thing we can't do: stretch a wire that's been cut in the wrong place. It's usually fixed with a pigtail. Is there a problem, code wise or listing, in cutting or lengthening the pig tail on a GFCI or ach fault breaker in a panel?

No quite often it cannot be installed without adding a length of conductor to it. Splices are permitted in panels. 8} infinity said: No quite often it cannot be installed. While it's tempting to just snip off a few inches and call it a day, the correct length of a pigtail significantly impacts the safety, reliability, and serviceability of your electrical system. You rearrange Me Till I'm Sane. If you're a qualified, trainee, or retired electrician -. Am I correct in assuming you mean on the load side of the meter?

In the past, I have handled situations where the cable was too large to fit under the meter lugs or when bringing in parallel feeds that needed to be tied under one lug, using approved insulated lugs. The ideal solution would be to.
