

Where to find the model number of the distribution box panel

AI Overview

The model number of a distribution box panel is usually located on a label inside the panel door or on the panel itself, often alongside the manufacturer and panel type.

Steps to Locate the Model Number

Locate the Distribution Box Your distribution box, also called an electrical panel or breaker box, is typically found in the basement, garage, utility room, or sometimes outside near the electrical meter. Look for a rectangular gray metal box about the size of a medicine cabinet.

Ensure Safety First Before opening the panel, turn off the main power if possible, wear insulated gloves and safety glasses, and avoid touching the panel with wet hands or standing in water.

Open the Panel Door Carefully open the panel door using a screwdriver if necessary. Do not force it, and avoid touching any live wires inside.

Check for Labels Look for a label on the inside of the panel door or on the panel itself. This label typically contains:

- Model number
- Manufacturer name
- Panel type
- Serial number
- Date of manufacture

Inspect Circuit Breakers Some panels may also have additional labels near the circuit breakers indicating voltage, amperage, and breaker type, which can help identify the panel specifications.

Consult a Professional if Needed If the label is missing, damaged, or unreadable, or if you are unsure about handling the panel safely, contact a licensed electrician to help identify the model number and ensure compliance with safety standards.

Tips Keep the area around the panel clear, with at least 3 feet of clearance in front of it. Regularly check and update labels to maintain clarity and safety. Document the model number and other panel information for future reference, especially for maintenance or replacement purposes. By following these steps, you can safely locate the model number and other identifying information of your distribution box panel.
